JAVA DEVELOPER

A passionate and growth-driven **Java Backend Developer** with hands-on experience in building scalable backend applications and microservices using **Java and Spring Boot**. Completed Software Engineering virtual experience programs with **Hewlett Packard Enterprise** and **JPMorgan Chase & Co.** on Forage, gaining practical exposure to enterprise backend development, RESTful API design, and distributed systems.

Experienced in developing **RESTful web services**, integrating **Apache Kafka for high-volume message processing**, and implementing **data persistence using Spring Data JPA with SQL databases**. Built Spring Boot applications capable of handling **HTTP requests, JSON data processing, and API integrations** with external services. Also developed **unit tests and Maven test suites** to ensure reliability and performance of backend systems.

Possess a strong understanding of **software development principles, system design, and clean architecture**, with a continuous learning mindset and a passion for building efficient, scalable, and high-performance backend solutions. Skilled in **Java, Spring Boot, REST APIs, Microservices, Kafka, SQL, Maven, and Backend Architecture**.

EDUCATION

BTECH CSE (AI), G.L. BAJAJ INSTITUTE OF TECHNOLOGY

2025 – 2029 | Greater Noida

B.Tech in Computer Science & Engineering (Artificial Intelligence) G. L. Bajaj Institute of Technology and Management

• **CGPA:** 8.14 / 10 (First Year)

• Building strong foundations in **Data Structures, Programming, Artificial Intelligence, and Software Development**.

SKILLS

Programming Languages: Java[Advance], Dart, C, Python

Problem Solving: DSA(Core)

Mobile Development: Flutter, Dart, GetX (State Management, Routing, Dependency Injection), REST API Integration, JSON Parsing, Responsive UI Design, Local Storage, Firebase (Basic)

Backend Development: Spring Boot, Spring MVC, RESTful APIs, Microservices, Servlet, JSP & JDBC

Frameworks: Spring Data JPA, Hibernate

Messaging Systems: Apache Kafka

Databases: H2 Database, PostgreSQL

Tools: Maven, Postman, IntelliJ IDEA, Git, GitHub, Vs-Code, Figma-Design

Testing: JUnit, Mockito

Concepts: OOP, System Design, Data Structures & Algorithms, System Design Architecture, JSON Processing, API Integration, Software Development Lifecycle (SDLC)

LANGUAGES

English

Hindi

PROJECTS

Transaction Processing Microservice

10/2025 – 03/2026

Software Engineering Virtual Experience – JPMorgan Chase & Co. (Forage) March 2026

- Developed a **Spring Boot microservice** to process high-volume financial transactions using **Apache Kafka** for message consumption and deserialization with configurable topics.
- Implemented **transaction validation and persistence logic** using **Spring Data JPA** with an **H2 SQL database**, including entity modeling and balance updates for relational user records.
- Integrated the service with an **external REST Incentive API** using **RestTemplate**, enabling automated incentive processing within transaction workflows.
- Built a **RESTful API endpoint** for querying user balances, returning structured **JSON responses** through a Spring Boot controller while maintaining clean architecture principles.
- Ensured system reliability by developing and running **Maven-based test suites** and using debugging tools to validate message ingestion, database operations, and external API interactions.

Technologies Used: Java • Spring Boot • Apache Kafka • Spring Data JPA • H2 Database • REST APIs • Maven • JSON • Microservices Architecture

Employee Management REST Service

03/2026 – 03/2026

Software Engineering Virtual Experience – Hewlett Packard Enterprise (Forage)

- Designed and proposed a **RESTful web service architecture** to manage employee records, focusing on scalable backend design and efficient API structure.
- Developed a **Java Spring Boot web server application** capable of accepting and responding to **HTTP requests** for employee data management.
- Implemented functionality to **upload and process JSON data**, enabling structured data exchange between clients and the backend service.
- Created **REST endpoints** for handling employee-related operations while following clean backend architecture practices.
- Built and executed **unit tests** to evaluate application performance, functionality, and reliability of the Spring Boot service.

Technologies Used: Java • Spring Boot • REST APIs • JSON Processing • Unit Testing • Maven • Backend Application Development

Blinkit Clone – Grocery Delivery Mobile App, Personal Project

- Developed a **cross-platform grocery delivery mobile application** inspired by **Blinkit**, using **Flutter and Dart** to replicate core e-commerce functionality.
- Implemented **clean and modular architecture** with **GetX state management** for efficient state handling, routing, and dependency injection.
- Designed responsive **UI/UX screens** including product listings, cart management, and order flow to simulate a real grocery delivery experience.
- Integrated **user authentication** using **Firebase**, enabling secure **login and signup workflows**.
- Built reusable widgets and optimized UI components to ensure **smooth performance and scalable app structure**.

Technologies Used: Flutter • Dart • GetX • Firebase Authentication • REST API Integration • Responsive UI Design • Git/GitHub

CERTIFICATES

Software Engineering Virtual Experience

JPMorgan Chase & Co. (Forage), 2026Skills: Java, Spring Boot, Apache Kafka, REST APIs, Spring Data JPA

Software Engineering Virtual Experience

Hewlett Packard Enterprise (Forage), 2026Skills: Java, Spring Boot, REST APIs, Unit Testing

SOFT SKILLS

- Problem-solving and analytical thinking
- Excellent attention to detail
- Strong ownership and work ethic
- Effective communicator and team collaborator
- Quick learning and adaptability
